

Fishing Table Game Machine

Decoder Box Time-Up Calculation Guide

HomingGame Factory

Product Overview

The HomingGame Fishing Table Game Machine uses a factory-programmed decoder box system to ensure accurate score calculation and fair operation when game time ends. All calculations are completed automatically and safely for commercial operation.

Automatic Time-Up Calculation Process

1. Game timer reaches zero
2. Player input stops automatically
3. Valid fish capture data is locked
4. Decoder box calculates final score
5. System resets for next round

Score & Credit Calculation Logic

Final Credits = Total Fish Reward – Total Bullet Cost

Only valid data before time-up is counted.

Parameter Item	Specification
Game Time	Adjustable seconds per round
Bullet Cost	Credits per shot
Fish Value	Reward multiplier setting

Return Rate	Target payout percentage
Jackpot Mode	Enable / Disable
Payout Mode	Score / Ticket / Credit
